Professional Summary

AWS-certified engineer with 2+ years of hands-on experience managing and optimising cloud-based production environments across EC2, RDS, S3, IAM, and CloudWatch. Strong background in infrastructure automation, scripting, and data pipelines, with proven impact improving system performance and reliability at scale. Experienced in debugging across application, database, and infrastructure layers, with a strong focus on cost optimisation, observability, and production stability.

Core Skills

Certifications: AWS Certified Developer Associate, Cloud Practitioner, CompTia Security+

Cloud and Infrastructure : AWS: EC2 (compute optimisation), RDS, S3, IAM, VPC, CloudWatch, Lambda, API Gateway, DynamoDB, SQS, SNS
Cloud Formation (IaC)

DevOps and CI/CD: CI/CD Concepts, Docker (containerisation), Git, Linux, Unix Systems

Monitoring: CloudWatch logging, metrics, and alerting. Production monitoring and performance analysis

Programming and Scripting: C++, Python, SQL, Bash/Shell scripting, [Node.js](https://nodejs.org/)

Data & Analytics: Informatica PowerCenter, PowerExchange, Workflow Manager/Designer

Professional Experience

Application Developer / Cloud Engineer

DXC Technology – Sydney, Australia | Sep 2022 – current

- Managed and supported **14 AWS-backed environments (test & production)** across EC2, RDS, and S3, ensuring high availability, performance, and system stability
- Troubleshoot complex issues across infrastructure, application, and database layers using **logs, metrics, and system-level analysis (CloudWatch + SQL diagnostics)**
- Designed and executed a **large-scale transactional SQL workflow (“ATC Purge”)**, removing ~6 million inactive records, significantly improving system performance and reducing SLA-critical processing time
- Automated operational workflows using **Bash scripting and Cron scheduling**, reducing manual intervention and improving reliability of production processes
- Monitored system health and performance using **CloudWatch metrics and logs**, proactively identifying and resolving system bottlenecks

- Maintained and optimised ETL pipelines, ensuring data integrity and performance across integrated systems
- Participated in controlled production deployments and change management processes, including risk assessment and rollback planning
- Collaborated with cross-functional teams to debug issues and implement long-term fixes across distributed systems
- Created, documented, and presented change requests in **ServiceNow**, including impact analysis, risk assessment, and implementation details, to support controlled application changes across test and production environments.

Full Stack Developer (Capstone Project)

AusCon – Sydney, Australia | Mar 2022 – Aug 2022

- Designed and deployed a **multi-service cloud architecture on AWS**, leveraging EC2, RDS, S3, IAM, and Route 53
- Built an approval-based workflow where subcontractors uploaded image evidence of completed tasks to **Amazon S3**, and project managers reviewed and approved submissions before subsequent tasks could proceed.
- Integrated **Amazon SNS fan-out** to automatically notify subcontractors when project managers approved submitted photo evidence and vice versa.
- Developed a **CRUD API hosted on Amazon EC2** with domain routing via **Amazon Route 53**, persisting application data in **Amazon RDS** to manage projects, tasks, and approval states.
- Produced comprehensive documentation including system architecture diagrams, Figma prototypes, installation manuals, and testing guides.

Data Analyst

PricewaterhouseCoopers (PwC) – Sydney, Australia | May 2020 – Jun 2022

- Managed client data engagements and delivered timely, data-driven insights aligned with business requirements.
- Had the opportunity to lead a team of **4 analysts**, providing day-to-day guidance, prioritising workloads, and supporting the delivery of accurate, data-driven insights to stakeholders.
- Conducted statistical analysis to support strategic and operational decision-making.
- Built dashboards and reports using Power BI and Tableau to visualize insights and trends.

Education - Bachelor of Computer Science Major: Cloud Computing | Minor: Cyber Security Western Sydney University | GPA: 5.8 / 7.0
